Subject: Draft Programmatic EIR for the Vegetation Treatment Program

As a former CDF Firefighter and a retired Registered Civil Engineer for California State Parks, I implore you to please revise your latest version of your proposed habitat clearance program that targets 1/4 of the state of California with herbicides, grinding machines, and unnatural fire. Instead, create a **Comprehensive Fire Protection Program** that:

- focuses on actual assets at risk rather than habitat clearance
- preserves the rights of citizens to object to destructive projects
- incorporates the most current science
- understands all native shrubland habitat, especially chaparral, is threatened by too much fire

The best way to protect lives, property, and the natural environment from wildfire is through a comprehensive approach that focuses on community and regional planning, reducing ignitability of structures, and modifying vegetation within and directly around communities at risk.

By focusing exclusively on clearing habitat, you are NOT addressing the main causes for loss of life and property from wildland fire.

About 22 million acres (1/3 of the entire state) is targetted for "masticating," spraying with herbicides, burning, or grazing. This would increase its existing habitat clearance program five times over current levels. If certified, the programmatic EIR will exempt individual habitat clearance projects from public oversight required by the California Environmental Quality Act (**CEQA**). Everything from **state parks** to private lands could be stripped bare without local notice or a chance to appeal.

Every decade we increase funding for habitat clearance operations and fire suppression activities, followed by a decade of even worse fire impacts. The Board's proposal perpetuates and expands this same approach, one that has failed to reduce cumulative wildfire damage and firefighting expenditures over the past century. As a consequence, the proposal is a **waste of tax payer money**, will cause significant **damage to the environment**, and will **fail to effectively protect Californians from wildland fire**.

Please, revise your latest version of your proposed habitat clearance program.
Thank you. Sincerely,

Jösan Feathers, Registered Civil Engineer
